Pocket Source

STS have launched an upgraded source to complement their Safe-Series range of instruments.

The Safe-Pocket Source is designed to be easily concealed, has an integral battery compartment and 10 strength levels to select from. Like the existing Mini-Source the Pocket Source produces a near isotropic field pattern to provide a very realistic training tool.

The Pocket source measures it perfect to slip into a pocket scenarios or for activation of a

just 105 x 65 x 24mm making to create lost source portal monitor simulator.

The source is compatible with all of the STS Safe-Series range, including the Survey-Safe, Safe-EPD, Safe-FH40, Dosi-safe and portal monitor. Up to 16 devices may be networked together to create complex training scenarios with different instruments.

The STS Safe-Series range brings new technology into handheld simulation to provide the most realistic simulators available today.
